

Converted Options

A range of faced roll and slab products.

Converted Options

A range of faced roll and slab products.

PRODUCT INFORMATION

TEK faced and encapsulated products are manufactured to meet specific acoustic, thermal, and fire requirements within the construction envelope, as well as, for the HVAC market.

Faced or encapsulated products can be manufactured from stone wool rolls and slabs, with the core products ranging in densities from 23kgm³ to 140kgm³.

These faced or encapsulated products can also be manufactured from glass fibre slabs or rolls, in differing densities and thermal performance values.

As well as using stone wool or glass fibre cores, we can also offer additional core materials, such as Class 0 foams, PE foams, phenolic and PIR boards, and industrial felts. These can provide additional fire, acoustic and thermal solutions.

Our external sales team can help to provide products that are cost effective, whilst working towards meeting current building regulation solutions (local requirements prevailing).
